TIERRAS DE MONTAÑA

Architect and Territorial Interface for Circular Industrial Ecosystems

Turning territorial resources into structured opportunities for industry, climate and rural development.

Tierras de Montaña (TDM), operated by SARAH JO S.A.S., is a Colombian platform that connects territorial resources, technology partners, industrial markets and investment opportunities to structure circular and climate-related initiatives.

We work across five strategic domains: Regenerative Agriculture, Climate Infrastructure, Circular Bioeconomy, Biodiversity Restoration, and High-Integrity Carbon Removal.

Regenerative Agriculture

Climate Infrastructure

Circular Bioeconomy

Biodiversity Restoration

High-Integrity Carbon Removal

Our role is to bridge the gap between local resources and industrial implementation — aligning territorial stakeholders, technical solutions, environmental integrity and market requirements within a coherent project architecture.

Through our four operational pillars — Biomass & Territorial Resources, Climate & Energy Infrastructure, Carbon & MRV Systems, and Industrial Markets & Value Chains — we help partners identify opportunities, define viable pathways and build the conditions for collaboration.

TDM is the territorial interface for partners ready to turn capabilities into concrete opportunities in Colombia and Latin America.

Let's identify where we can work together.
